Crocs: Bad Debts in Real Financial Statements

Crocs sells many of its shoes to retailers and distributors (shoe stores, department stores) on credit. They pay weeks later.

Income tax benefit	39,486
Net income	$ 950,071

FROM CROCS'S 10-K

*"Selling, general and administrative expenses consist primarily of labor and outside services, rent expense, **bad debt expense**, legal costs, amortization of intangible assets, as well as certain depreciation costs related to corporate and non-product assets and share-based compensation."*

ACCOUNTS & TERMS

Accounts receivable (gross A/R)
The total amount customers owe for goods sold on credit. An asset.

Allowance for doubtful accounts (ADA)
The estimated total amount of A/R that will not be collected, as of the balance sheet date. A contra-asset subtracted from A/R.

Accounts receivable, net (net A/R)
Gross A/R − ADA: the amount the company expects to collect.

Bad debt expense (BDE)
An operating expense on the income statement: the amount needed to bring ADA up to the new estimate. For example, if ADA was $1,000 and the company now expects $3,000 of A/R will not be collected, it records $2,000 of BDE.

Allowance method (GAAP)
Estimate BDE in the same period as the credit sales (matching principle).

FIND IT IN THE STATEMENTS

Write the amount ($ thousands, or %).

Answer as of **December 31, 2024** (the end of 2024), unless a question says otherwise.

1. In total, how much did customers owe Crocs at year-end? **289,236**
2. How much does Crocs estimate it will never collect? **31,579**
3. How much does Crocs actually expect to collect in cash? **257,657**
4. What percentage of what customers owe does Crocs expect never to collect? **10.9%**
5. Out of every $100 customers owe, about how much does Crocs expect to collect? **$89**
6. Assuming no accounts were written off during 2024, how much bad debt expense (BDE) did Crocs record in 2024?† **3,988**

† You don't have to think about write-offs too much now; we'll cover them in class. For your information, a **write-off** removes a specific customer's account from A/R once it is known to be uncollectible. It reduces both gross A/R and ADA.

‡ Bad debt expense is included in SG&A, but it is only a **small portion** of it: well under 1% of Crocs's $1.39 billion of SG&A in 2024.

Crocs's reported "allowances" ($31,579) also include reserves for customer returns and discounts; this worksheet treats the total as the allowance for doubtful accounts. Accounts receivable (gross), other current assets, "property, goodwill, brands and other", long-term liabilities, SG&A and "interest expense and other, net" are derived from reported totals.
